

POTATO DISEASE CLASSIFICATION

MAJOR PROJECT REPORT

SUBMITTED IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR THE
AWARD OF THE DEGREE OF

BACHELOR OF TECHNOLOGY
(Computer Science and Engineering)

Abstract

The potato is one of the major crops. Potato cultivation has been very popular in for the last few decades. But potato production is being hampered due to some diseases which are increasing the cost of farmers in potato production. However, some potato diseases are hampering potato production that is increasing the cost of farmers. Which is disrupting the life of the farmer. An automated and rapid disease detection process to increase potato production and digitize the system. Our main goal is to diagnose potato disease using leaf pictures that we are going to do through advanced machine learning technology. This project offers a picture that is processing and machine learning based automated systems potato leaf diseases will be identified and classified. Image processing is the best solution for detecting and analysing these diseases. In this analysis, picture division is done more than 4634 pictures of unhealthy potato's leaf, which is taken from openly accessible dataset in Kaggle website plant town information base and a few prepared models are utilized for acknowledgment and characterization. Among them, the program predicts with an accuracy of 99% in testing with 25% test data and 75% train data. Our output has shown that machine learning exceeds all existing tasks in potato disease detection.

ACKNOWLEDGEMENT

We are highly grateful to the Dr. Sehijpal Singh, Principal, Guru Nanak Dev Engineering College (GNDEC), Ludhiana, for providing this opportunity to carry out the major project work at . The constant guidance and encouragement received from Dr. Kiran Jyoti H.O.D. CSE Department, GNDEC Ludhiana has been of great help in carrying out the project work and is acknowledged with reverential thanks. We would like to express a deep sense of gratitude and thanks profusely to Priyanka Arora, without his/her wise counsel and able guidance, it would have been impossible to complete the project in this manner. We express gratitude to other faculty members of computer science and engineering department of GNDEC for their intellectual support throughout the course of this work. Finally, we are indebted to all whosoever have contributed in this report work.

Divyanshu Kumar
